What Projects Qualify for the BSA Distinguished Conservation Service Award?

First and foremost, projects must be conservation oriented. They must be designed to address a conservation issue or need in the local area, and they must benefit the environment or the creatures that live there. Making an area more accessible for people is rarely for the benefit of the environment.

How big these projects should be and how long they should last are commonly asked questions.

Collecting aluminum cans over a weekend along with many other Scouts is a fine public service, but since little learning took place and there was no lasting impact on the community, the project would not qualify towards this Award. Similarly, a simple, one-time tree planting effort would not qualify.

However, a reforestation project in cooperation with a professional forester or park planner, learning which trees are appropriate to the area, ensuring proper spacing for best growth, following proper planting methods, and caring for the trees after planting might well qualify. Starting a community-wide recycling project and encouraging people to recycle might also qualify. Size of the project is not necessarily the important element. Rather, the results, the learning that took place, the applicant's demonstrated leadership, and the significance of the contribution to the community, park, or other lands are what count.

Projects Categories:

- Energy conservation
- Soil and water conservation
- Fish and wildlife management
- Forestry and range management
- Air and water pollution control
- Resource recovery (recycling)
- Hazardous material disposal and management
- Invasive species control
- Pollinator Habitat Conservation

How to Earn Scouting's Most Prestigious Conservation Award

Introduction of the BSA Distinguished Conservation Service Award:

Conservation and the Boy Scouts of America have been partners for a long time. Camping, hiking, and respect for the outdoors are a part of the Scouting heritage. Many of the requirements for advancement from Tenderfoot through the Eagle Scout rank call for an increasing awareness and understanding of the natural sciences. Many former Scouts have become leaders in conserving our environment and protecting it from abuse. Right now, Scouts are involved in learning about environmental problems and actively working to make a difference.

The fundamental purpose of the BSA Distinguished Conservation Service Awards program is to encourage learning by the participants and to increase public awareness about natural resource conservation. Understanding and practicing sound stewardship of natural resources and environmental protection strengthens Scouting's emphasis on respecting the outdoors. The goal of this awards program is to encourage and recognize truly outstanding efforts undertaken by Scouting units, Scouts and Venturers, adult Scouters, and other individuals, corporations, and institutions that have contributed significantly to natural resource conservation and environmental protection.

BSA Distinguished Conservation Service Award Individual awards are granted by the National Council through the local Council's Conservation Committee to a member of a Scouts BSA, Sea Scout, or Venturing unit for exceptional and distinguished service to conservation and environmental improvement.

The BSA Distinguished Conservation Service Awards are presented for distinguished service in natural resource conservation. The award is given in one of three forms. The awards are:

Youth: BSA Distinguished Conservation Service Award

Adult: BSA Distinguished Conservationist

Organizations and Individuals: BSA Distinguished Conservation Service Award Certificate

The award, the most distinguished in Scouting for exceptional conservation service, will be awarded for clearly outstanding efforts in planning, leadership, execution of plans, involvement of others, and opportunities taken to help others learn about natural resource conservation and environmental improvement.

The award includes the BSA Distinguished Conservation Service Award certificate and an embroidered square knot.

Conservation Service Projects:

The BSA Distinguished Conservation Service Awards program encourages and recognizes Scouts, Sea Scouts and Venturers who design, lead, and carry out conservation projects that are based on sound scientific principles and practices. The projects should contribute to sound conservation and environmental improvement in the local community, the region, or the nation. The applicant is expected to research potential projects and to choose, with guidance from a conservation adviser, a worthy project.

Because the awards are individual awards, two or more individuals cannot claim credit for the same project. However, a project may be a part of a larger conservation effort, with different applicants carrying out different aspects of the same project. An Eagle Scout leadership service project may be used as a conservation project if it meets the aims and objectives of the awards program as listed below. Applicants are encouraged to involve their unit members in project work and demonstrate Scout leadership.

To assist the applicant with the documentation needed in completing the service projects, and the documentation of the completed projects, the BSA Distinguished Conservation Service Award Project Workbook has been developed and is required to be used by the applicant.

Required Projects:

Applicants for the BSA Distinguished Conservation Service Award must plan, lead, and carry out at least two significant conservation projects in two different categories. One project may be the applicant's Eagle Scout service project, if it is suitable. Projects can also be performed on BSA properties or other private lands (conservation problems do not recognize ownership patterns). Educational projects are allowed but must be in different categories, and fundraising is allowed to support your BSA Distinguished Conservation Service Award projects.

The project categories are listed on the reverse side of this brochure. They are designed, in part, to make conservation awards available to Scouting youth living in suburban and urban areas as well as those in rural settings, and to acknowledge the growing interest among Scouts, Venturers, Sea Scouts and their leaders in actively improving the natural environment within their communities. These categories also focus on the relationship between environmental abuses in urban centers and their impacts in relatively unpopulated, sometimes distant areas.
